

## ZHD/ML Seating Riser

### Product Information Sheet

Versatile,  
quick conversion  
seating riser

Combine the performance advantages of the StageRight ML1600 and Z-HD support systems and you have a versatile quick setup/strike seating system capable of multi configurations that stores in a minimal amount of space. The support system combines the ML-1600 folding design with the Z-HD multiple locator's to allow bridging from side-to-side and front-to-back utilizing standard StageRight decking. Expanded bridging makes this an economical solution and is an ideal application for venues with multiple seating riser requirements and limited storage space.

## Features and Benefits

### Versatile Setups

Seating system can be configured in multiple configurations to host a variety of events.

### Minimal Storage

Expanded bridging capability reduces the number of required supports. Decks are demountable and supports fold together to store compactly and efficiently.

### Bridging Deck System

The bridging deck system illustrated here shows how 12 decks can be supported by just 6 understructures.

- Standard supported deck
- Bridged deck

## Technical Specifications

### Function

Portable risers shall accommodate a wide variety of events. Units shall be capable of utilizing bridge decking front-to-back and side-to-side.

### Supports

Support structure shall fold together for storage and be built with baked on powder coat finish.

### Decks

Decks shall be dual sided and shall be available in either TechStage or carpet surfaces.

### Performance

System shall be capable of supporting 125#/sq ft. minimum.
